

# **PS-020 Two Component Encapsulant**

## **Description:**

This product is a two-component silicone encapsulant, which is a liquid electronic material with various properties such as low density and buffering. The product can be cured at room temperature or under heat. It can be widely used to fill the gap between different electronic devices. It has excellent flowability and leveling before curing. After curing, it will not come out of the protective shell and can meet the wide range of customer needs.

## Characteristic

- Good flowability and can effectively fill the gap
- Good insulation property with good reliability
- Good processability

## **Typical Applications**

- LED lighting
- Automotive electronics
- Telecom base stations
- Microprocessors and graphic chips
